## Comments:

- We had a small break at the beginning of the sprint to allocate time for other course projects, hence the low completion of story points before March 15
- After March 15, the work dramatically increased, staying at30 story points for the rest of the sprint
- Velocity picked up in the middle. This is due to the break we had at the beginning of reading week. Throughout the week, we kept good pacing, although we could've spread out our work more instead of cramming towards the end of the week.
- Velocity was better in sprint 2 than sprint 3, due to newfound motivation to work on a project that had a working backend and frontend. Sprint 2 was also during reading week, which may have been a factor.
